Context and Objectives of The Case Study

Context

- The non-profit healthcare sector is **growing in complexity** due to rising service demand, changing volunteer behavior, and Vision 2030 impact requirements.
- Namaa depends on volunteers but faces engagement, retention, and productivity challenges, as well as operational inefficiencies.
- To scale its impact, Namaa needs a **more strategic and data-driven volunteer management model** across HC and NHC roles.
- how to design an optimal volunteer mix and operational strategy** that will:
 - **Expand** and diversify the volunteer base,
 - **Improve** retention and productivity,
 - **Strengthen** the Foundation's ability to deliver high-quality healthcare services across Saudi Arabia.

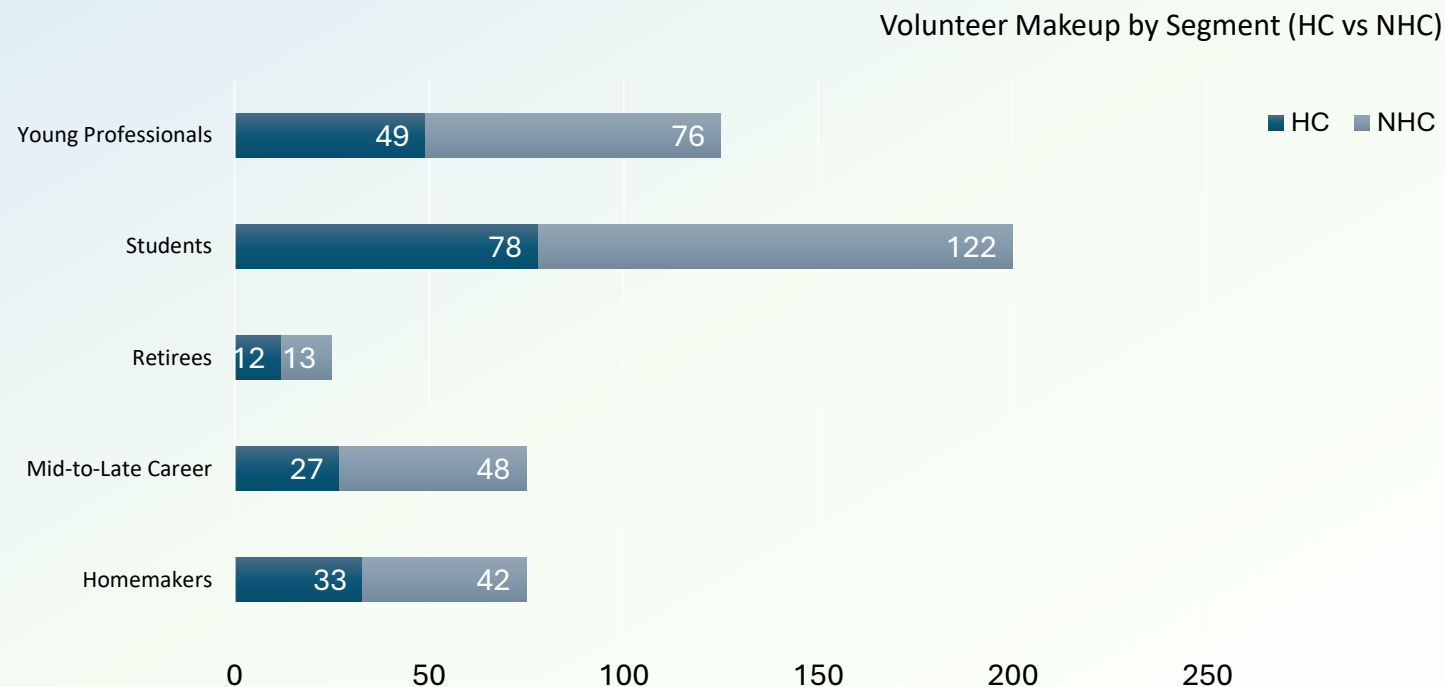

Objectives

Question1 : Understanding The Current Volunteer Base

The Current Size and Makeup of Namsa's Volunteers by Segment

The size and makeup of Namsa's volunteer base by segment categorized by **healthcare** vs **non-healthcare** background.

It shows that **Students** represent the core of Namsa's volunteer base, supported by a balanced mix of Young Professionals, Homemakers, and Mid-To-Late Career individuals, while **Retirees** form a smaller yet valuable portion of the group.

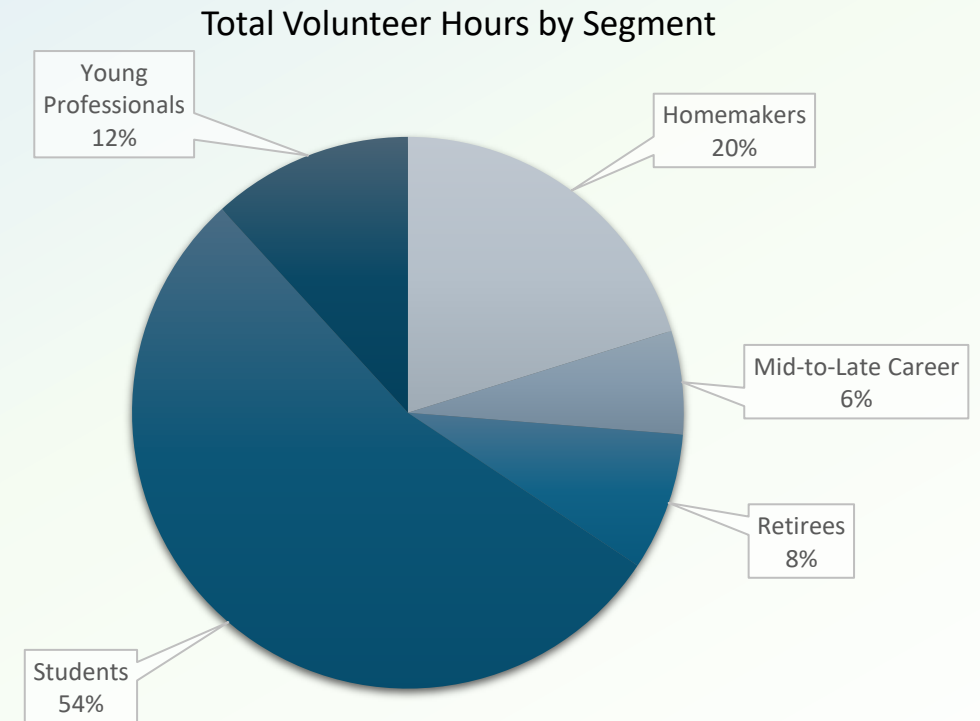

Question1 : Understanding The Current Volunteer Base

The Current Breakdown of Total Volunteer Hours by Segment

Most volunteer hours come from **Students**, who contribute **54%** of the total.

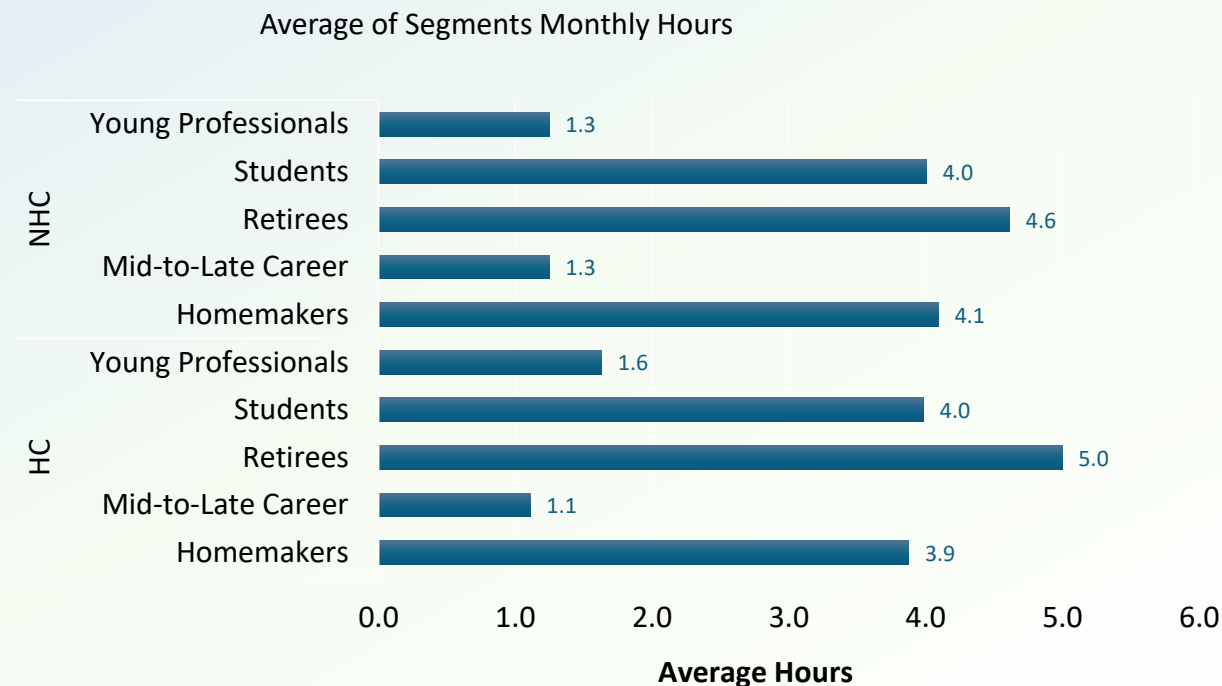

This indicates that Students form the **core** of the volunteer base, but other groups; especially Homemakers and Young Professionals, also play a significant supporting role.

Question2: Assessing Current Volunteer Productivity and Value

The Average Volunteering Hours of Each Volunteer Segment

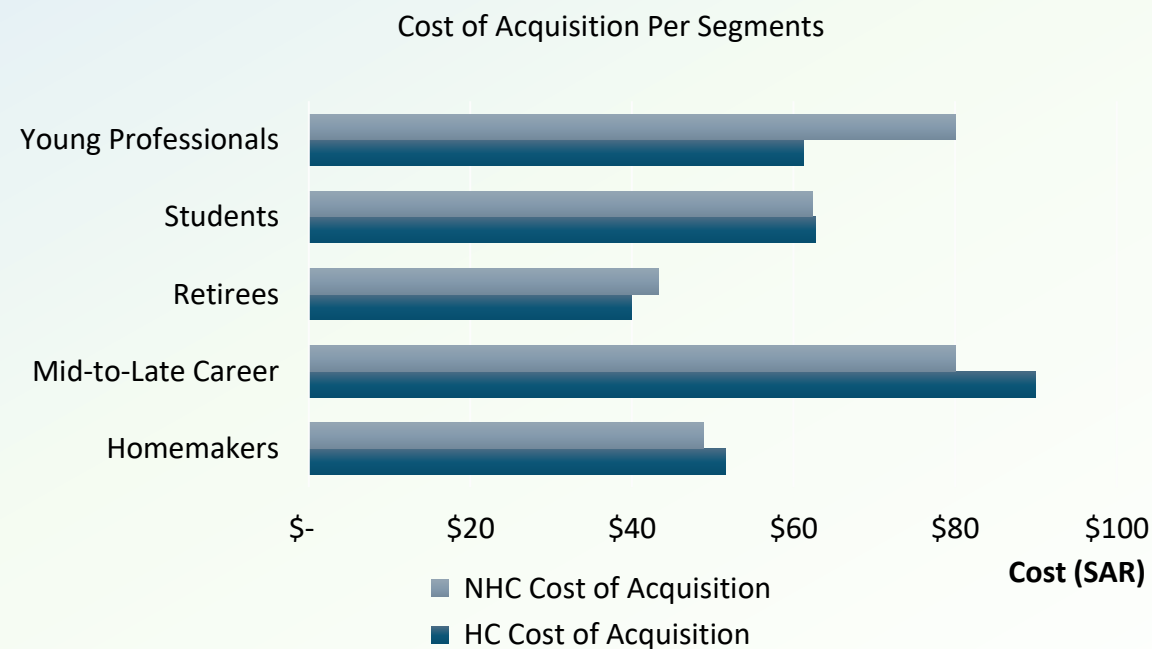

Retirees achieve the **highest** average monthly volunteering hours, while **Mid-To-Late Career** volunteers record the **lowest**. This interpretation applies to both categories of volunteers with healthcare & non-healthcare background.

Question2: Assessing Current Volunteer Productivity and Value

The Cost of Acquisition Per Volunteer Hour by Segment?

Retirees not only record the highest average volunteering hours, but in addition of that, they also demonstrate the **lowest cost of acquisition per volunteer hour**, providing consistent and valuable contributions with low acquisition expenses.

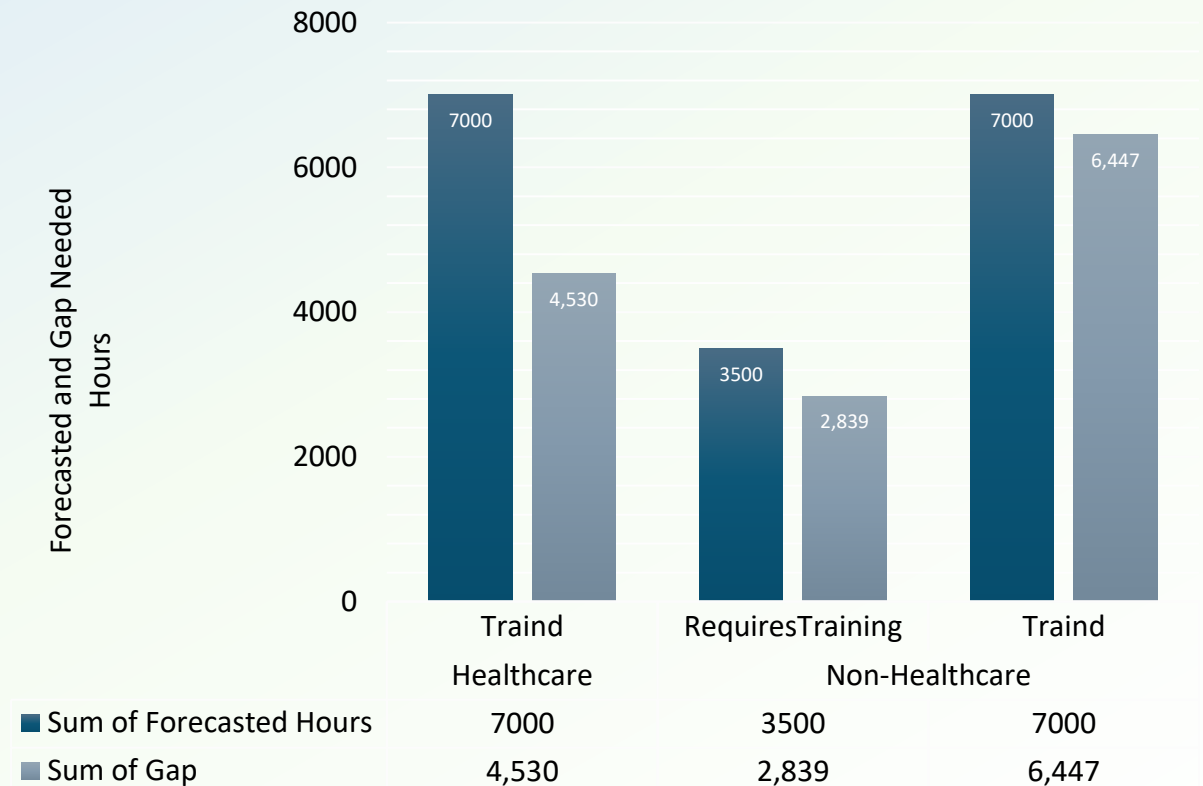

Question3: Forecasting Future Volunteer Needs

The Forecasted Demand for Volunteer Hours by Category & Additional Volunteer Hours Across Different Categories
Does Namaa Foundation Need To Meet Its Forecasted Demand?

The data confirms a critical gap in volunteer resources. Namaa Foundation must secure an additional **13,816 forecasted hours to meet the projected demand.**

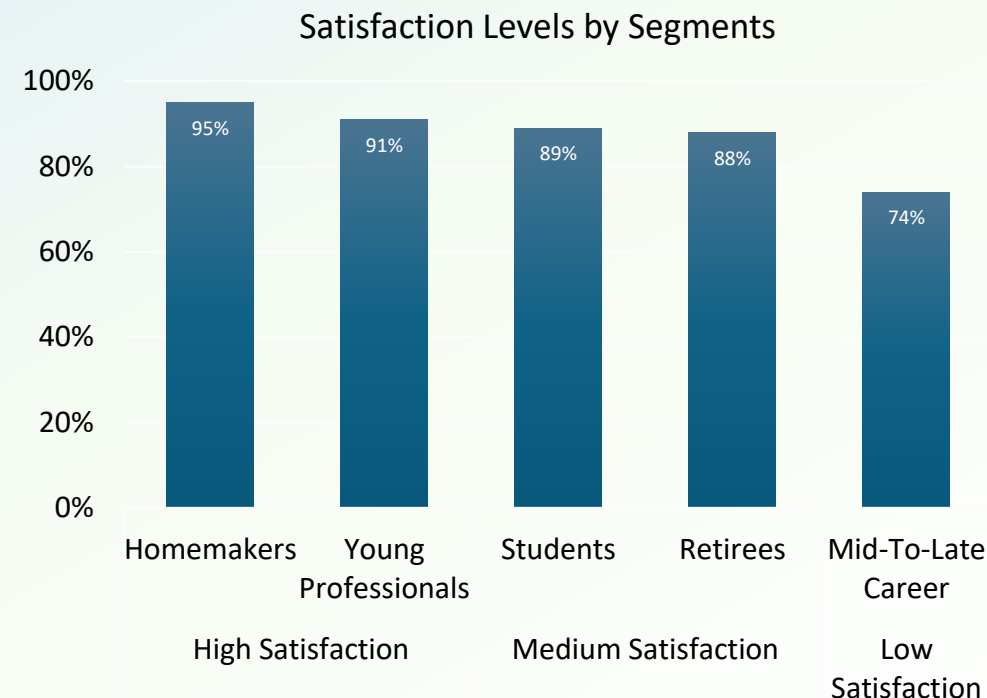

The most significant shortfall is observed in the **non-healthcare** sector, which accounts for the majority of this deficit, necessitating an immediate and effective targeting plan.

Question4: Recommended Target Segments

The Pros and Cons of Prioritizing and Targeting each segment

- **Homemakers** segment offers the **highest return on recruitment investment**, aligning strong engagement with flexible availability exhibiting superior volunteer experience (**95% High Satisfaction**) and provides essential scheduling flexibility. But they need initial training which is a manageable investment given the high expected retention and quality of engagement.
- **Mid-To-Late Career** segment contributes professional competency, leadership and established networks to their respective area of specialty, that may be useful in special projects, mentorship and strategic roles. on the other hand, This group experiences **the least number of average volunteer hours (1.5 hours per volunteer)** and **lowest satisfaction levels (74%)**, indicating that it they are not engaged.

Question4: Recommended Target Segments

Recommended Volunteer Segments for Recruitment

The analysis we have done shows that not every volunteer segment is created equally. To develop a high-impact volunteer workforce, which is sustainable, we suggest a three-layered approach:

TIER 1: THE Cost-effective Work Force (Retirees)

- The cost of **40 SAR by hour** for retirees is the **lowest** among all the segments and they provide exceptional value.
- They are the ones who **work the most hours (5.0 monthly)** and are **highly satisfied (88%)**.
- They are experienced in life and most of them are **healthcare professionals** and hence they are suited in the clinical environment.
- **Impact:** The maximization of healthcare services delivery and minimization of the recruitment costs.

TIER 2: THE FUTURE PIPELINE (Students)

- Having **80%** healthcare experience and being **highly satisfied (89%)**, they are ideal to undertake clinical and community education work.
- Students are enthusiastic and already **trained (82% are trained)**.
- University connections offer outsourced forms of recruitment.
- **Impact:** Develop a sustainable talent pipeline while service quality is maintained.

TIER 3: THE Flexible Support NETWORK (Homemakers)

- Engage for **Non-Healthcare** Support Roles
- The **most satisfied (95%)** homemakers provide flexible scheduling.
- Their **100%** Non-Healthcare background fills critical administrative and logistical gaps
- **Impact:** Improve capacity to work and retain outstanding volunteer experience.

Question4: Recommended Target Segments

National Volunteerism Trends That Support Our Recommendation

Within the framework of Saudi Vision 2030, the influence of powerful macro-level volunteering tendencies in Saudi Arabia contributes to our recommendations, which are actively encouraged. The choice of prioritizing Students, Homemakers and Retirees is not only an internal efficiency decision, but also one that makes sense strategically in keeping with the priorities of the national and assures a sustainable and effective volunteer pipeline.

Students: Taps into the **youth empowerment** pillar, engaging the large young population and building a future pipeline of skilled professionals.

Homemakers: Directly supports the goal of **increased women's participation** in society, leveraging a growing pool of educated talent seeking purposeful community roles.

Retirees: Aligns with the focus on "**active aging**," utilizing the extensive experience and dedication of seniors for stable, high-impact contributions.

This approach ensures Namaa's strategy is both effective for its needs and resonant with the Kingdom's national transformation goals.

Thank you
